

ELASTOFLEX[®] MA65L

Plastic Additive

Inspiration of Technology

Descriptions

Elastoflex MA65L is a moisture absorbent material. It is designed for eliminating the moisture, bubbles and porosity in plastic product and improves product quality and productivity without impacting on mechanical properties. This material can be widely used in the PE, PP, EVA etc.

Typical properties

Resin Properties	Test Method	Unit	Value
Melt Flow Rate (190°C/2.16kg)	ASTM D1238	g/10min	1.20
Density	ASTM D792	g/cm ³	1.70

General Processing Information

Elastoflex MA60 is supplied in grey granular, and is normally add to the base resin at a level of 1% to 3 wt%.

Storage and Keeping Condition

Please keep in dry, room temperature, do not expose sunlight, suitable air ventilation, away from fire, dust and moisture.

Notes

Typical properties; not to be construed as specifications.
